

CanGuard™ Carton

NEW
Patented

Market Need: Can dispenser openings are common on the billions of beverage cartons sold annually. Cartons designed with dispensers on the lower edge are very popular but they have a problem: all too often, a customer removes one can from the carton and it is followed by an avalanche of additional cans crashing onto the floor.

Dispensers are common on the billions of cartons sold each year.

New Solution: CanGuard is an improved beverage carton that solves this common problem and also makes it easier for customers to open the dispenser. Protect the beer. Please the customer.

Many cans often crash to the floor after one is removed. That's can cruelty.

Does not increase the cost of the carton

No added components to the packaging

Does not require any change to the size of the carton or its blank

Does not require any change to manufacturing, packaging or distribution

Makes it easier for the consumer to open and use the carton

Improved dispenser innovation provides another advantage to your brand

The CanGuard design improves the dispenser so that only one can comes out at a time, and makes it easier for customers to open the carton
