

SafeGuard™ Remote

NEW
Patented

The child-proof, guest-proof, pet-proof remote control that prevents accidental changes to settings

Market: The billions of TV's, cable or satellite boxes, DVR's, DVD players, and stereos worldwide.

Has a child or guest ever pressed the wrong key on your remote and suddenly the aspect ratio or set-up is changed?

The *SafeGuard* remote is an innovative system that blocks the many unneeded keys. These problem keys can easily be unblocked at any time, too.

50 or more tiny keys are squeezed onto many modern remotes -- and most are not needed in daily use.

Accidental key presses can cause an unwanted change, such as aspect ratio, source or no signal.

To reverse the unwanted change, the user has to navigate through confusing menus, or worse, has to call someone in to fix the problem.

All too often, a wrong key is accidentally pressed by you, a guest, a child or a pet.

- An Intuitive way to lock and unlock individual keys on a remote
- Does not add to the cost of remotes or controlled devices
- Requires little or no modifications to existing remote designs
- Enables a one-SKU remote for use in hospitals, hotels and waiting rooms
- Requires no modifications to the controlled devices

Ready for production now with little or no tooling costs.

Nothing like it on the market.

Provides a feature that customers value and your competitors do not have.
