

The Elevator™ Sprinkler Housing Extension

NEW
Patent Pending

1-Minute repair of Sunken Sprinkler Heads

In-ground sprinkler heads become sunken over time, crippling their spray coverage, damaging the lawn and wasting water.

Market:

Every residential and commercial lawn with pop-up sprinkler heads
Many will buy multiple *Elevator* extensions per lawn
People won't buy another brand if the sprinkler head is not dug up

Fast: Repair each sunken head in one minute

No damage to surrounding grass

No more breaking water lines or severing electrical lines or cables

Low cost - anyone can afford the new *Elevator* extension

The Old Way

vs

The New Way

Until now, raising the sprinkler head required digging a large hole around the head, which can kill surrounding grass.

It can take **twenty minutes or more** per head to dig under the supply line in hard-packed clay or rocky soils, wait for the line to drain, install the pipe extension, and replace the soil and grass.

Remove the cap and install the Elevator housing extension

Insert the tool to align the splines

Reinstall the cap. Job done in **one minute**

A one SKU new product that increases sales and adds value to your product line

Ready for production and marketing now with good profit margins

No competition - Nothing like it on the market

Licensing is now available.
